

AFFORDABLE COMFORT PROTECTION

MegaDome

PRE-ENGINEERED BUILDINGS

MegaDome

ENJOY A BRIGHT, COMFORTABLE ENVIRONMENT ALL YEAR LONG WITH THE MEGADOME

UNIQUE STEEL ARCHES

The innovative 24" deep double arch truss features straight bracing pieces, with top and bottom components in 14 gauge oval tubing. This unique design offers a stronger arch with increased loading capacity. Made of oval tubing, these arches exert less stress on the fabric than round or square tubing, providing increased life expectancy of the cover. For smaller applications, the single arch model offers easy installation, strength and cost effectiveness. All structures are pre-engineered to meet local building codes.

MAXIMUM RIDING SPACE

The MegaDome riding arena can be installed on a variety of foundations. The XP profile has been specifically designed with riding arenas in mind and allows the rider 100% use of the covered surface. For your convenience, the HP profile can also be installed on a wood pony wall to provide the same clear span riding space. No "wasted" space along the walls:

CORROSION RESISTANT STRUCTURE

For years of corrosion free use, the MegaDomes are pre-galvanized, with brass welding on corrosion prone areas. MegaDomes can be hot dip galvanized after welding for maximum protection in highly corrosive environments.

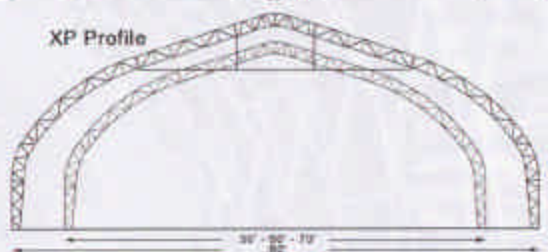

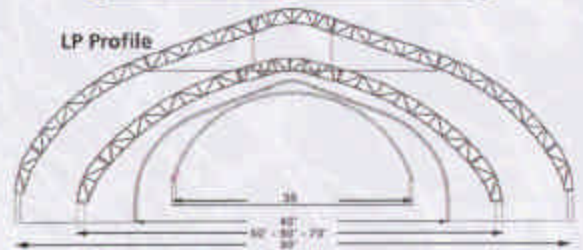

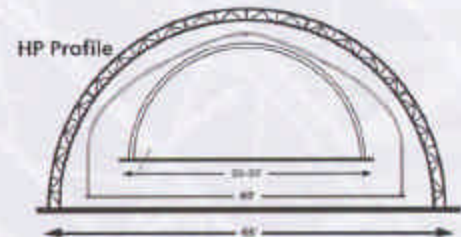

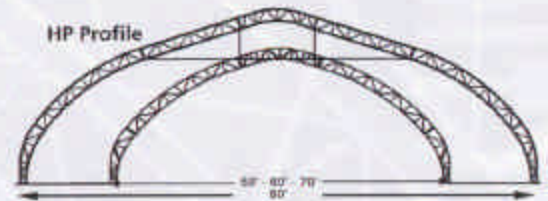

BRIGHT AND PROTECTED

The MegaDome riding arena is covered with tough PowerShield™ poly-fabric cover, providing a naturally bright and well protected riding space. Compared to traditional riding arenas, where light is dim and the environment is damp, both horse and rider will appreciate the comfort of practicing their sport under a MegaDome. Made of durable, woven 10 oz/sq. yd. polyethylene, fabric is manufactured to withstand the extremes of North American and is backed by the best warranty on the market. It is guaranteed 100% replacement on the first 5 years, and is then prorated up to 10 to 15 years, depending on choice of color and application.

- Available in different colors - white and beige recommended, with other colors available on request.
- Possibility of matching different colors on the same cover.
- All covers have a white underside for maximum light reflection.
- Also available: Flame retardant fabric - 10 oz/sq. yd.
Industrial strength, flame retardant fabric - 18 oz/sq. yd.

OPTIONS

- Curtain doors from the manufacturer are covered with tough polyethylene fabric, come in a variety of sizes, and are offered with either manual or motorized openers. Maximum size 14' x 14'
- Side and roof ventilation options are available.
- Structures can be fitted for single man doors, overhead garage doors and supplemental lighting.
